- Two-Way Voice
- Health Insights
- Contact Tracing
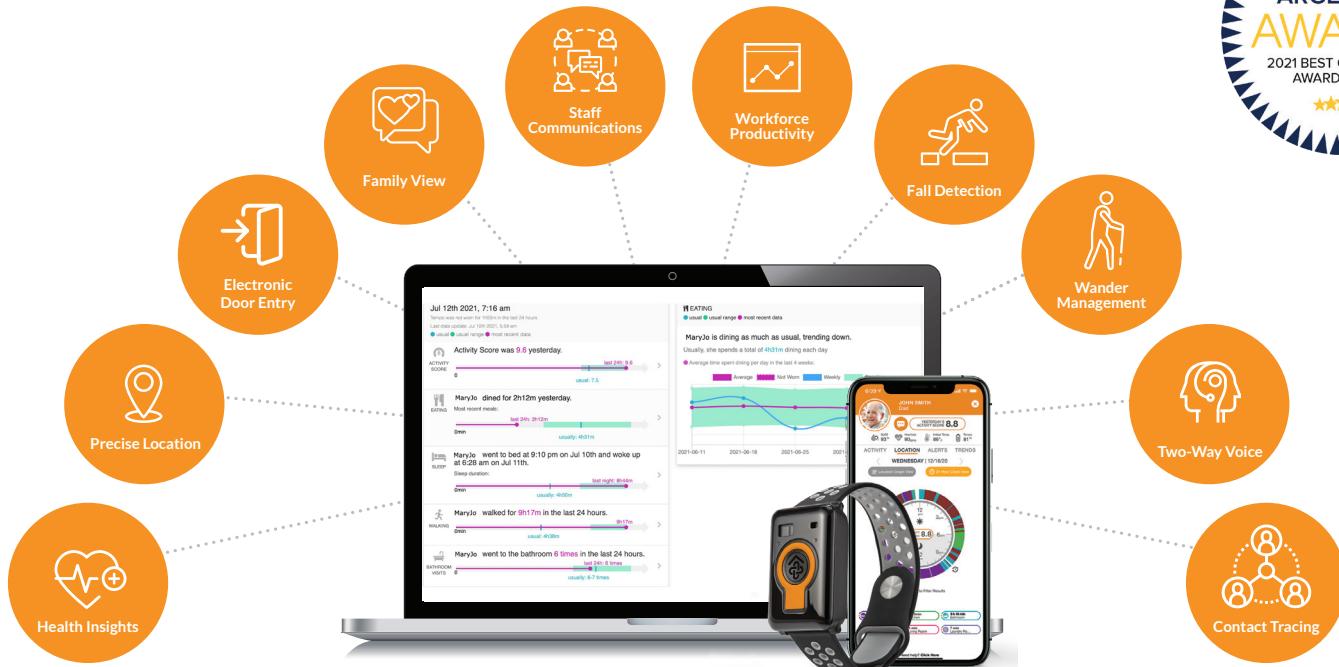

Along with the longstanding challenges of occupancy, resident and staff retention, senior living operators today face new trials of safety and rebuilding trust. While technology has the power to transform the delivery of senior care, most senior living technologies today are point solutions focused on addressing one or two problems. A cohesive solution that meets multiple needs has been absent till now.

CarePredict's AI-powered senior care platform consisting of a multifunctional wearable, Tempo™, provides operators with a single pane of glass view that encompasses all aspects of care delivery – resident health and safety, workforce productivity, and operational efficiency.

GET THE **CAREPREDICT** ADVANTAGE

39%	Fewer Unplanned Hospitalizations
69%	Reduced Fall Rate
67%	Increase in Length of Stay
37%	Faster Staff Response Time
60%	Faster Occupancy Ramp-Up Rate

INSIGHTS

HEALTH

The Tempo autonomously observes and learns each resident's daily activity and behavior patterns. When there is a deviation from an individual's "normal" patterns, the system alerts on a wide range of potential concerns such as UTIs, depression and an increased risk for falls. This ability to detect the early signs that might be imperceptible to humans provides the facility staff with actionable information far earlier when interventions will be most effective.

LOCATION

CarePredict's precise real-time location technology is used for Digital Contact Tracing and to provide wander management. Location insights provide valuable data on resident interaction and amenity utilization.

WORKFORCE PRODUCTIVITY

CarePredict provides unprecedented visibility into staff responsiveness to alerts, time spent with residents on various care activities and offers significant insights into quantity and the quality of care being provided.

SAFETY

WANDER MANAGEMENT

CarePredict's real-time geofence alerts and wander management focuses on residents' independence while ensuring their safety. All alerts are customizable by the resident, time, and location setting based on the resident's wandering risk.

FALL DETECTION

Tempo's sophisticated fall detection algorithms continuously learn and improve over time to detect possible falls.

CONTACT TRACING

CarePredict PinPoint is designed to stop the spread of infection in high-risk, high-density areas such as senior living facilities and nursing homes. When a suspected carrier is identified, staff can use PinPoint to instantaneously find all the contacts an infected person had - with whom, where, when and for how long - to help isolate just the right people and disinfect just the right areas.

COMMUNICATIONS

TWO-WAY VOICE

CarePredict's Tempo wearable allows two-way voice communication for staff to communicate with residents. With the ability to check on the residents immediately upon receiving an alert, staff can prioritize and respond faster.

STAFF COMMUNICATIONS

CarePredict facilitates enhanced communication and coordination between staff members through app-to-app call and chat functionality, replacing walkie-talkies.

FAMILY VIEW

Communities can choose to provide families with information about their loved ones through CarePredict's user-friendly TouchPoint app. Families and users can access information on where residents spend most of their time in the community and their overall activity levels.

CONVENIENCE

TOUCHLESS ACCESS CONTROL

Tempo is integrated with keyless door entry systems for easy opening, providing convenience to residents and staff, while providing enhanced accountability.
